

**Biocidal effect**

**Wide range of applications**

**Safety of use**

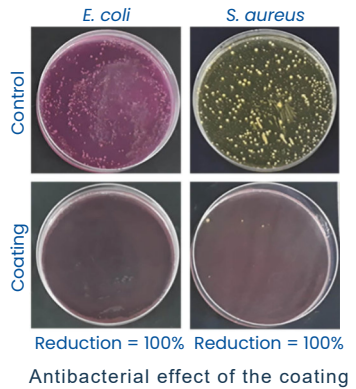

**High cost-efficiency**

We offer a service of covering stainless steel elements with nanosilver coating.

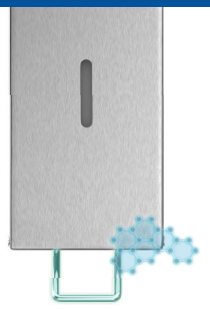

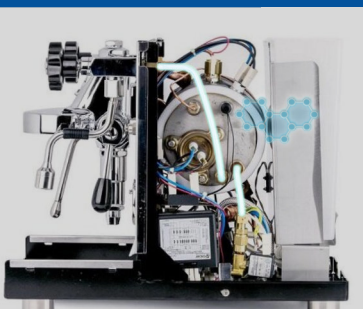

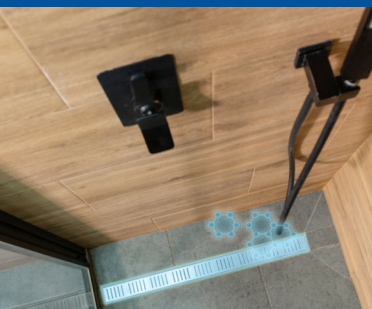

**The coating provides antibacterial, antifungal and antiviral properties**, thus increasing the biological safety of the coated elements.

The coating is characterized by **high microbiological activity** (>99% reduction). The technology used ensures the effectiveness and repeatability of surface coating and guarantees **safety of use**.

## A wide range of applications

**The coating perfectly protects** all steel elements with a high degree of exposure to the colonization of microorganisms, e.g.: systems of flow coffee machines and water dispensers, sanitary drains, door handles, elements of hospital bed frames, and many others.

It is possible to adjust the concentration of nanosilver according to the customer's needs. Our coatings are also characterized by **high cost effectiveness**.
